

Analysing UN SDG Research with SciVal – The Case of the University of Auckland

Dr Jingwen Mu, Strategic Planning Manager, The University of Auckland

Key Facts About the University

RANKED #1

The University of Auckland is the highest ranked university in New Zealand in Times Higher Education and QS rankings

More than
8500
international
students

From over
120
different
countries

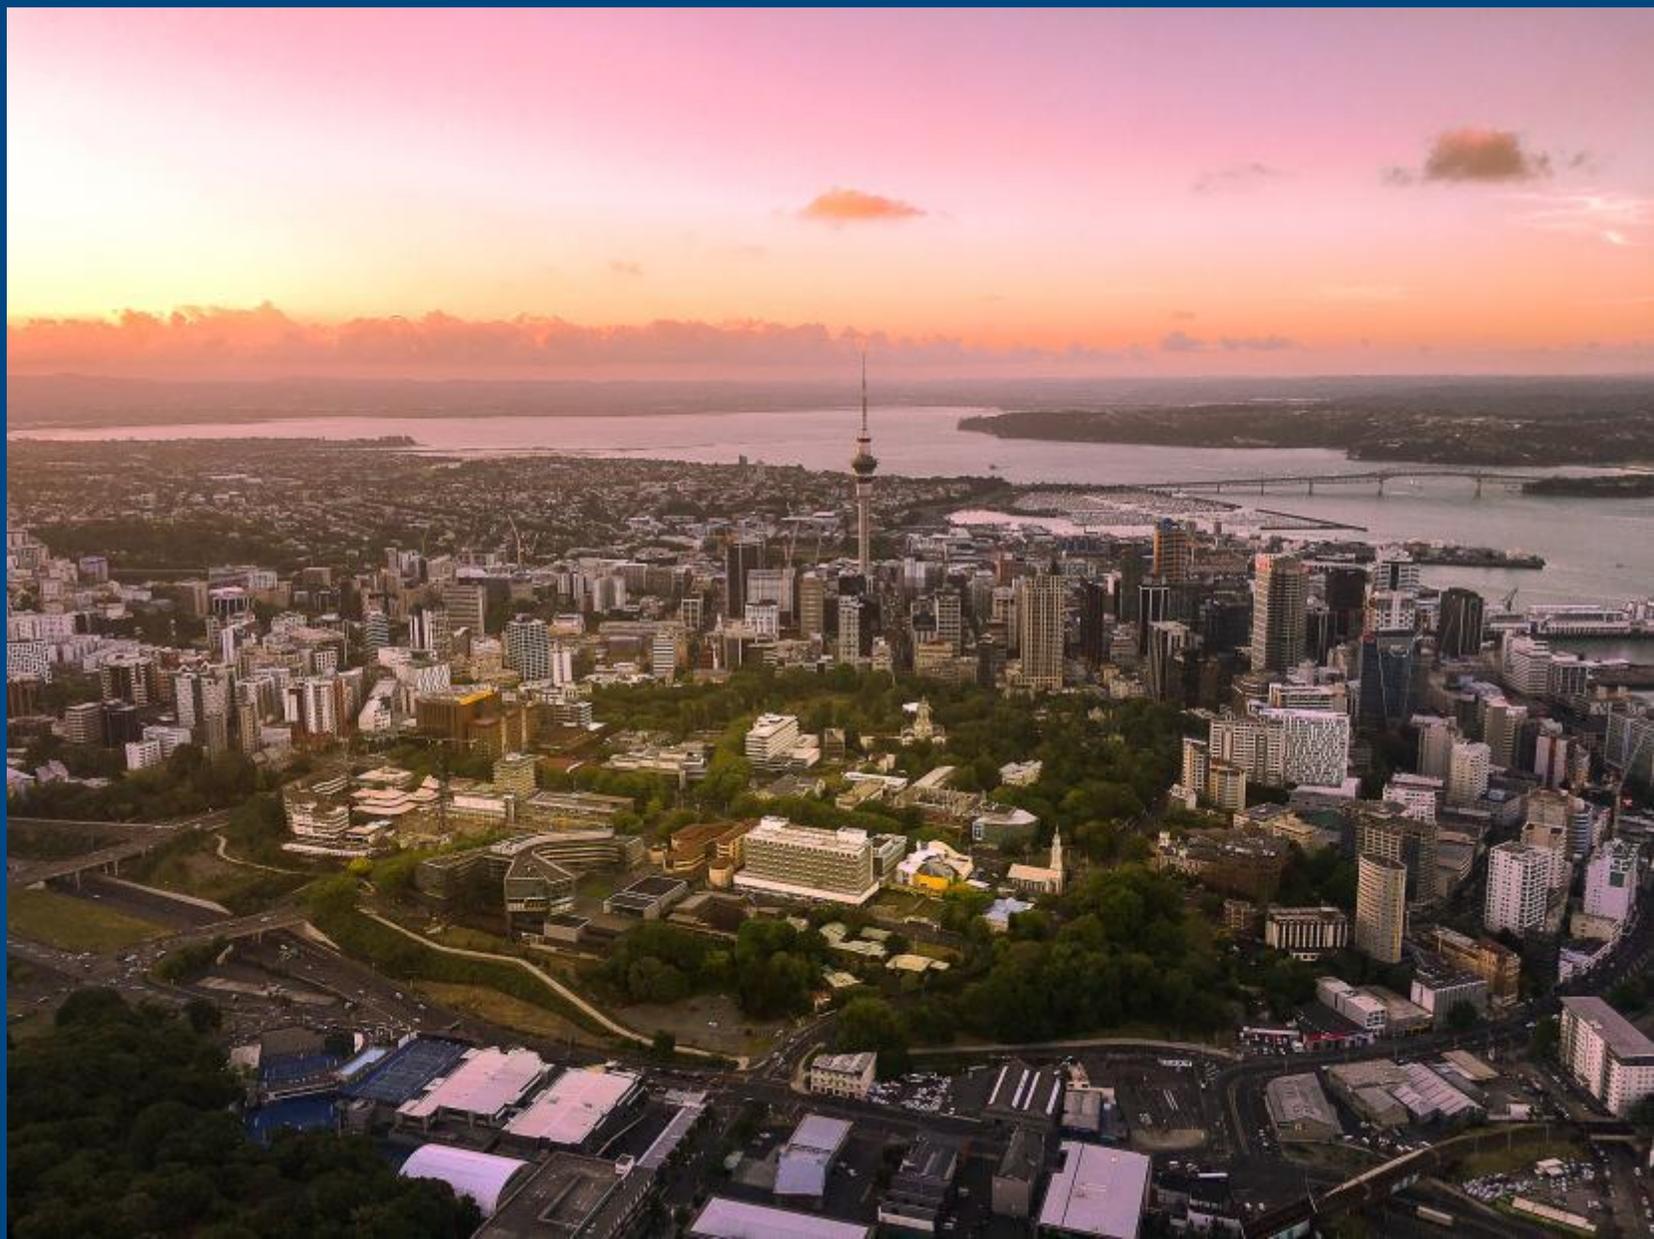

Highest ranked
New Zealand
university
for graduate
employability¹

The University of Auckland is ranked

81st

in the world²

TRANSFORMING OUR WORLD:

THE 2030 AGENDA FOR
SUSTAINABLE DEVELOPMENT

“The 2030 Agenda

This Agenda is a plan of action for people, planet and prosperity. It also seeks to strengthen universal peace in larger freedom.

We recognise that eradicating poverty in all its forms and dimensions, including extreme poverty, is the greatest global challenge and an indispensable requirement for sustainable development.

We are determined to take the bold and transformative steps which are urgently needed to shift the world onto a sustainable and resilient path.

We commit ourselves to working tirelessly for the full implementation of this Agenda by 2030.

Our Reflection on the UN SDGs

We know there are different research teams and interest groups at the University doing fabulous SDG activities, but...

who are they?

Globally No.1? Not bad, but...
"How can we improve?"

While SDGs are very broad, inclusive, and interconnected, **what are some of the topics or themes arising from bibliometric analyses?**

Third mission accomplished?

What are the impacts of our SDG research?

Improving quality of life by sustainably managing urban water

Associate Professor Asaad Shamseldin, Civil and Environmental Engineering, Faculty of Engineering.

Our goal is to support sustainable and resilient urban water management. Urban water management is globally important as half of the world's population lives in cities. In New Zealand, 70% of the population lives in urban areas. We aspire to provide innovative, sustainable solutions to mitigate the impacts of urbanisation on the environment and also the impacts of climate change on urban water management. We are proud to be at the forefront of this research, with strong collaborations with industry and overseas universities. Together, we are developing solutions that make significant contributions to improving quality of life. We're pleased that our research contributes to the United Nations Sustainable Development Goals and looking forward to the next step: our future research that will focus on how big data can be efficiently utilised in the sustainable management of urban water.

IAHR, founded in 1935, is a worldwide independent member-based organisation of engineers and water specialists working in fields related to the hydro-environmental sciences and their practical application. Activities range from river and maritime hydraulics to water resources development and eco-hydraulics, through to ice engineering, hydroinformatics, and hydraulic machinery.

About Membership Communities Directory Publications E-Library Events E-Shop

Sustainable Development Goals Working Group

Aims and Scope

The IAHR Working Group on the Sustainable Development Goals (SDGs) aims at coordinating IAHR's activities in support of the SDGs. For this purpose, it collaborates with several IAHR Technical Committees.

Besides SDG 6 which aims at ensuring the availability and sustainable management of water and sanitation for all, the experience and knowledge of IAHR members on the hydraulics of engineered structures and natural systems, especially in the context of sustainable management. Goals that directly or indirectly affected by or depend on water include ending poverty in all its forms (SDG 1); ensuring good health and well-being for all (SDG 3); affordable, reliable, sustainable and clean energy (SDG 7); consumption and production (SDG 12); climate change (SDG 13); and biodiversity, forests, deforestation (SDG 15).

SciVal SDSN

An Auckland Approach – SDG Mapping by Text Mining

Some Observations:

1. The text-mining exercise led to the discovery of local themes and keywords
2. Different expressions of the same or similar topic/concept
3. Some high-frequency keywords are very specific and pertinent to a specialised readership e.g. academic peers in the same subject area

Goal 3: Ensure healthy lives and promote well-being for all at all ages

Updated search string (first update): 3,157,306 document results

SDG3 Keywords and Research Metrics

Target	SDG Keywords	Keyword Description	Alternative / Similar Keywords	Impact Ranking Keywords (Y/N)	Publ...
3.1	maternal health	Maternal health refers to the health of women during pregnancy, childbirth and the postpartum period.		Y	201
	maternal mortality	Maternal death or maternal mortality is defined by the World Health Organization (WHO) as "the death of a woman while pregnant or within 42 days of termination of pregnancy, irrespective of the duration and site of the pregnancy, from any cause related to or aggravated by the pregnancy or its management but not from accidental or incidental causes."	maternal death	Y	
3.2	child health	Child health is a state of physical, mental, intellectual, social and emotional well-being and not merely the absence of disease or infirmity. Healthy children live in families, environments, and communities that provide them with the opportunity to reach their fullest developmental potential.		N	
	child mortality	Child mortality, refers to the mortality of children under the age of five. The child mortality rate, also 'under-five mortality rate', refers to the probability of dying between birth and exactly five years of age expressed per 1,000 live births	child death	N	
	congenital heart disease	A congenital heart defect (CHD), also known as a congenital heart anomaly and congenital heart disease, is a defect in the structure of the heart or great vessels that is present at birth.	CHD	N	
	infant mortality	Infant mortality is the death of young children under the age of 1. This death toll is measured by the infant mortality rate (IMR), which is the number of deaths of children under one year of age per 1000 live births.		Y	
	live birth rate	Live birth rate was defined as the number of deliveries that resulted in a live born neonate, expressed per 100 embryo transfers	live birth rates	N	
	low birth weight	Low birth weight is a term used to describe babies who are born weighing less than 5 pounds, 8 ounces (2,500 grams). Babies weighing less than 3 pounds, 5 ounces (1,500 grams) at birth are considered very low birth weight. Low birth weight is most often caused by premature birth.		N	
	neonatal intensive care	Newborn babies who need intensive medical care are often put in a special area of the hospital called the neonatal intensive care unit (NICU). A neonatal intensive care unit (NICU), also known as an intensive care nursery (ICN), is an intensive care unit (ICU) specializing in the care of ill or premature newborn infants.	neonatal intensive care unit; NICU	N	
	neonatal mortality	Neonatal death is defined as the death of a live born infant, regardless of gestational age at birth, within the first 28 completed days of life. Each neonatal death can be further clarified into viable and non-viable deaths depending on the gestational age at which they were born.		Y	

Note: Publication and citations data were retrieved from Elsevier in April 2020. They are likely to change over time as citations data are updated regularly.

Distinguished Professor Jane Harding with study participants

Ensure healthy lives and promote wellbeing for all at all ages

3 GOOD HEALTH AND WELL-BEING

3 IN EVERY 10
Of our graduates receive a health-related degree

30%
Graduates in Health Profession

CHILDHOOD OBESITY PLAN

New Zealand has the second-worst obesity rate in the Organisation for Economic Cooperation and Development (OECD). Working on the Government's Childhood Obesity Plan to meet a new national health target, Dr Yvonne Anderson (Liggins Institute) worked with local health boards (Taranaki District Health Board and Sport Taranaki) to deliver multidisciplinary assessment and intervention programmes for children and adults that bring healthcare to homes, targeting Māori communities and low socioeconomic groups. The programme resulted in improved health reports and developed new methods of assessing childhood obesity.

SMOKING CESSATION

Tobacco smoking kills more than 8 million people each year, the majority (80%) of these in low- and middle-income countries, where tobacco-related illness and death further exacerbates poverty and inequalities. Researchers at the University's National Institute of Health Innovation are working on numerous tobacco cessation projects with both a national and global focus. Amongst the many projects are: contribution to the development of the mCessation handbook for the World Health Organisation on mobile phone-based support for smoking cessation by Associate Professor Robyn Whitaker, used by many countries to implement large scale mCessation programmes; smoking cessation programmes testing novel products for NZ, with a focus on Māori who smoke, led by Associate Professor Natalie Walker; a low-cost primary care smoking cessation and smokefree homes intervention among tribal people in rural South India, and with Zhejiang University, China, a social media-based smoking cessation intervention targeting Chinese adult men, around half of whom are smokers, both led by Professor Chris Bullen.

IMPROVED OUTCOMES FOR NEWBORNS

Research into neonatal hypoglycaemia by Distinguished Professor Jane Harding (Liggins Institute) has led to new treatment methods for newborn babies with low glucose levels, a condition that can cause developmental delay, brain damage and lowered education outcomes later in life. Professor Harding's research findings have changed medical practice globally and halved rates of New Zealand neonatal intensive care admissions for babies with this condition. In 2019 this work earned Professor Harding the Rutherford Medal from the Royal Society of New Zealand, New Zealand's highest science honour.

COMBATTING TROPICAL DISEASE

University of Auckland researchers from the Maurice Wilkins Centre for Molecular Bioscience, in collaboration with the Drugs for Neglected Diseases Initiative in Geneva, have developed a new drug, ON21-0100, for the often-fatal tropical disease Leishmaniasis. The drug is currently in clinical trials. This disease affects people in 98 countries, with two million new cases in 2018, and causes up to 50,000 premature deaths yearly.

MENTAL HEALTH AND ADDICTION

Professor Ron Patterson from the Faculty of Law chaired the New Zealand Government Inquiry into Mental Health and Addiction, which consulted widely with the community to identify unmet needs and make recommendations for a better mental health and addiction system. As part of its response to the inquiry, the Government has committed to establishing an independent Mental Health and Wellbeing Commission that will contribute to better mental health and wellbeing outcomes for people in New Zealand.
